

Build a foundation to extend Microsoft 365 Copilot

Course MS-4014

Open enrollment: 4 hours

Course description

This course covers how to extend Microsoft 365 Copilot capabilities through Microsoft Graph connectors and declarative and custom engine agents. It helps learners choose the most suitable development path and concludes with the management and distribution of agents. The course gives learners the opportunity to explore the Microsoft 365 admin center for agent administration.

What you learn: Discover the fundamentals of extending Microsoft 365 Copilot and how this powerful AI tool can help you more effectively orchestrate business processes for improved productivity and reduced costs.

Audience profile

This course is designed to be role-agnostic and is appropriate for anyone who wants to learn the basics of extending Microsoft Copilot 365 functionality.
